E-Mail: [divya996@gmail.com](mailto:divya996@gmail.com)

Phone: 9347066765

To secure a challenging position where I can effectively contribute my skills as Software Professional, possessing competent Technical Skills.

## CORE COMPETENCIES

ReactJS / Redux

JavaScript

HTML/CSS

Bootstrap

Carbon Design & AntD

JIRA

IDE: VS Code, Chrome

developerVersion Control

## PRO FILE SUMMARY

- **4.6** Years of experience in the field of Information Technology, worked extensively on a variety of **Application servers**, Web, **GUI** front ends and Internet applications.
- Hands on experience in **JavaScript, React, Redux, Html5, CSS, Carbon, Sass, Carbon Components, JIRA Components**.
- Experience in using **React JS components, Forms, Router, Redux, React Bootstrap AntD**.
- **Supported** environments like Dev, Test, UAT and Production Support procedures.
- Highly motivated, an effective team player with strong analytical and good communication skills.
- Ability to provide **trainings** on the technologies working.

## NOTABLE ACCOMPLISHMENTS ACROSS THE CAREER

- Awarded with **IBM blue points** for good performance and delivering projects on time.
- Awarded for **IBM 2022 Essential Awards**.
- Awarded for **Re-usable components Storybooks** building.
- Awarded with **excellence award** in IBM.
- Awarded with **Spotlight Award** in IBM for good performance within short period of time.

## ORGANISATIONAL EXPERIENCE

### Project #1

**Technology Stack:** ReactJS, React Hooks, JavaScript, HTML5, SCSS, AntD, MUI Components, Jenkins

**Mercedes Benz Research and Development (Welcome Assistant)**

**Synopsis:** This Project is about Company to maintain and track the data of the vehicle easily, helps dealership to have proper planning for the day, It Reduce the waiting time of the customer, Serves luxury to the customer with pre- booking time slots. And Suitable consultant will be assigned for the appointment. Sales can be improved based on the data of sales appointments.

**Roles and Responsibilities:** My role on this project is Frontend Developer, here I developed the web components and pages and API integration to display data using react redux tool. And for Frontend created CI/CD pipeline in Kubernetes cluster.

### Project #2

**Technology Stack:** ReactJS, React Hooks, JavaScript, HTML5, SCSS, AntD, Jenkins

**Mercedes Benz Research and Development (Ansify/Q&A Platform)**

**Synopsis:** This Project is about Question and Answer posting in a platform, where users can post or answer the questions which already present in the home page, user can upvote or downvote the question/answer. User can see user Profile and can

edit the user profile. Also, user can see the related tags to all the questions posted by users. Notification and settings page also, they can see in the application.

#### **Roles & Responsibilities:**

- My role on this project is Frontend React developer, here I developed the Tags Display page and marking a question to star page, Notifications page, user settings page, support and leaderboard page ..

#### **Project #3**

**Technology Stack :** ReactJS, Redux, JavaScript, HTML5, SCSS, Carbon Design Pattern

#### **SALT(Client -St Andrews Links)**

**Synopsis:** SALT (ST Andrews Links) is a Web based tool for Golf Game, where users can login and fill The Profile details and they can enroll for the Tournaments. And users (Golf Players) can get time to tournament updates via emails. Azure Login configuration have for this Project. Users (Golf Players) can book play Golf Game from this website.

#### **Roles & Responsibilities:**

- My role on this project is frontend developer, here I developed forms using typescript with react. And integrated with **GraphQL API's**.

#### **Project #4**

**Technology Stack:** ReactJS, Redux, JavaScript, HTML5, Sass, Carbon Design Pattern **WEB**

#### **ESTIMATIONTOOL (IBM Internal)**

**Synopsis:** Worked on React based Web Portals:

**1: WEB ESTIMATIONTOOL (IBM Internal)** - The Application is basically a automation of Excel sheet into web application. This Application is based on the Estimations that solution managers create to get bids for the projects. Not only they can create estimations also can get reviewed and vice. Application is divided into inputs and output pages where in input pages we can edit calculate and save estimations for each application and in output pages they can see the calculated amounts, data and charts.

#### **Roles & Responsibilities:**

- **Translated** design team's UX wireframes and mockups into responsive, interactive features, using **HTML/CSS**, **Carbon Components**, **REACT** and **JavaScript**.

#### **Project #5**

**Technology Stack:** ReactJS, Redux, JavaScript, HTML5, Bootstrap, CSS3, Nodejs with express framework.

#### **IRBASSETSHAVERSTING (IBM Internal)**

**Synopsis:** In this project worked on IBM CARBON COMPONENTS and developing angular React and Node components in storybook for further reuse of all other projects.

Basically, components developing to reuse for all other projects. And also storybooks publishing in all stacks of front-end and backend (express js)

#### **Roles & Responsibilities:**

- Developed ReactJs reusable components as a storybook and NodeJS components which can reusable in another applications while installing the library of the storybook

#### **Project #6**

**Technology Stack:** JavaScript, HTML, CSS, React js

#### **British Petroleum (Manthan web App)**

**Synopsis:** In these Manthan tool we can create Resources and we can request for the Resources. And managing all Invoice details for resources. Using this website Upload their Invoices excel sheets and Demand management of each user/resource.

#### **Roles & Responsibilities:**

- Developed the dashboard and upload excel sheet from UI, forms to create the resources and to upload invoice of each resource developed web pages.

#### **Project #6**

**Technology Stack:** Angular, ReactJS, JavaScript, HTML, CSS.

#### **IBM INTERNAL PROJECTS (Multiple POC's)**

Technology stack: -HTML, SASS, CSS3, Angular, Node Synopsis: Worked on multiple POCs/Projects and Web Applications.

### 1. Squad Portal

This application will help the user to create squad members with their utilization and to maintain an dashboard which consists of each and every Squad with their name, members, technologies used in the squad, their Utilization.

### 2. TAC Tools

To design an application (TAC tools) where we can find as well as add all the required application links. Same Web app looks like w3.ibm.com.

### 3. Automation Microsite

Development of micro-site for Advertisement of Automation. Worked on customer stories components, with Angular 8, CSS and HTML5 and Worked on sign-up and sign-in pages.

### 4. Advertisement in UI Ga

Overall, in India, for UI garages developed one advertisement tool to publish lectures, videos and ppts etc.

## CERTIFICATION

- Udemy Certified on ES6 JavaScript
- Certified for Microsoft: Azure Fundamentals
- Certified for Technical Advocate –Cloud V3.
- Udemy Certified on React/Redux.
- IBM certified for Garage Foundation skills.
